

Process

1. Open the mitmproxy web

2. Then filter the traffic using `~a .png` command then start capturing packets by visiting any site on the windows machine (In Private window)

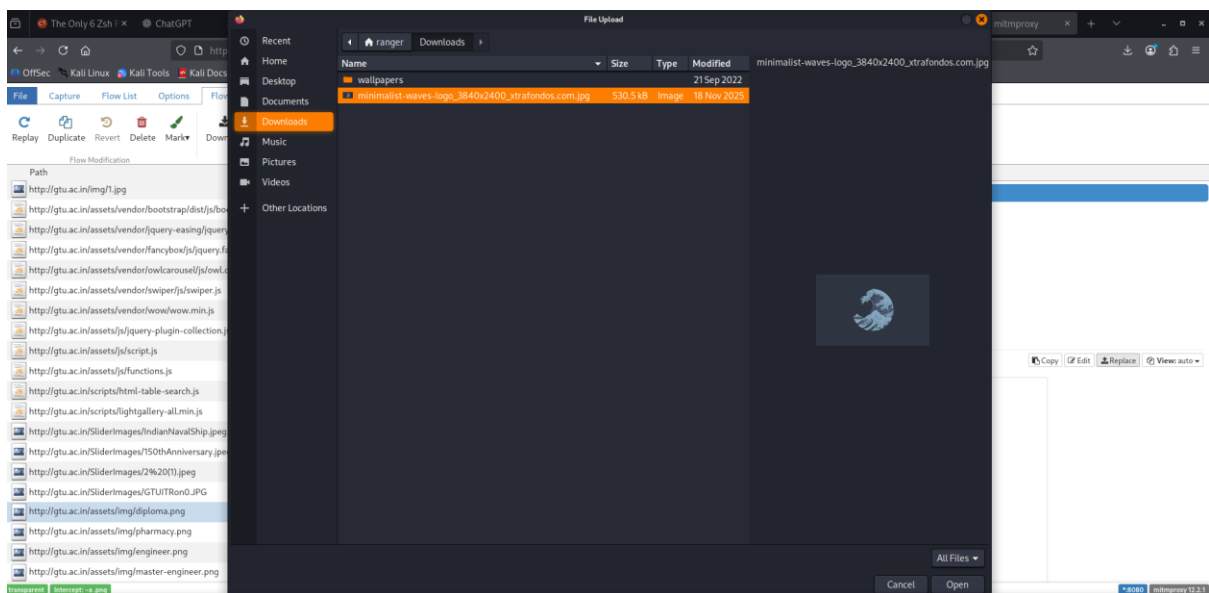

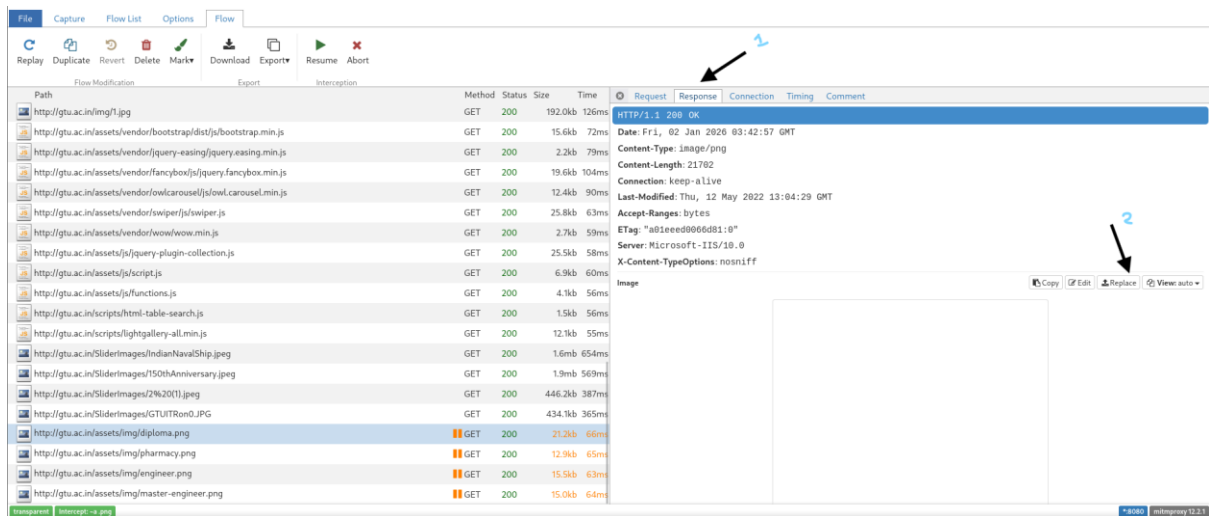

ex:- <http://gtu.ac.in/>

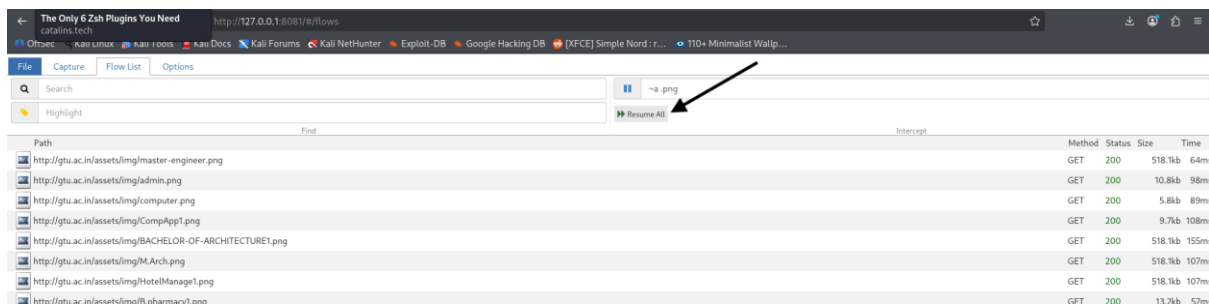

3. After intercepting some traffics find the pause .png files and click on it.

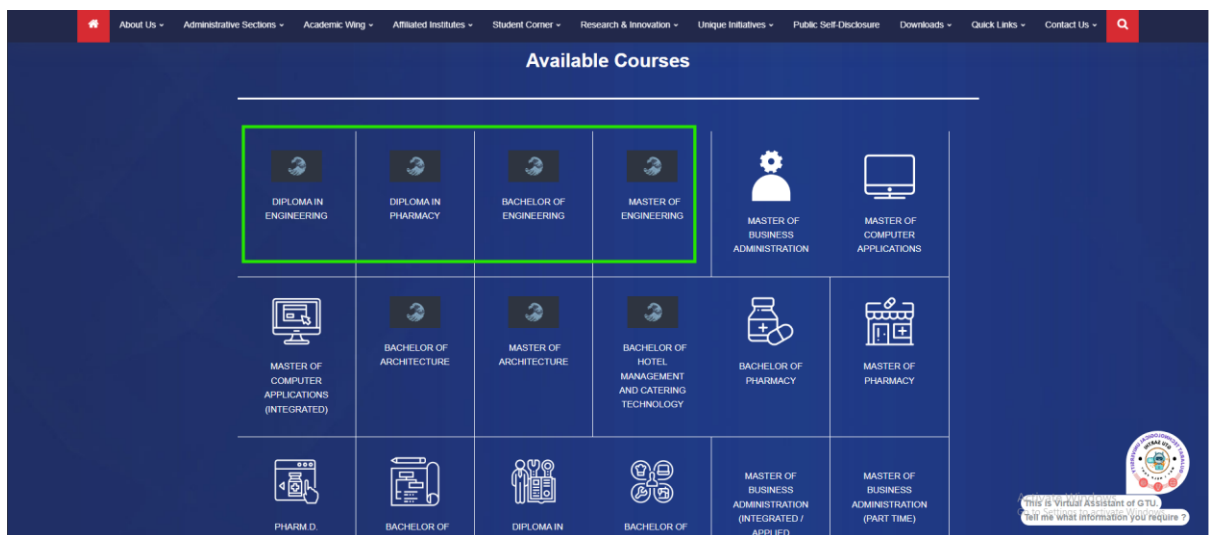

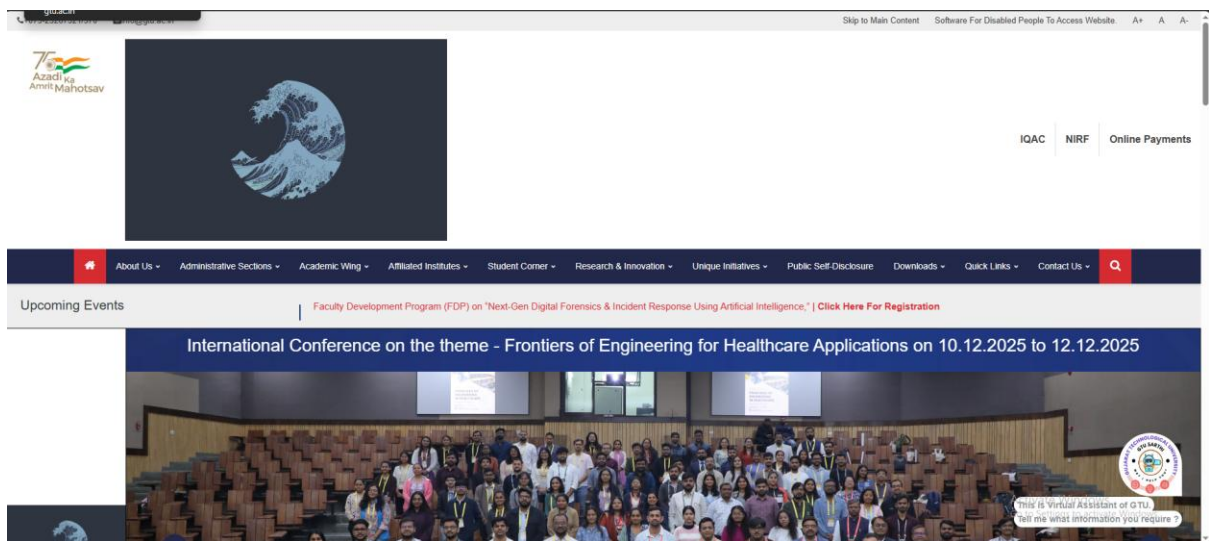

4.Next go to the response tab and hit the replace button and select a image we want to change.

5.Then resume all button

6.Now we can see the changes on the victim machine.

Congratulations you are hacked!!!!
